

Contract Analyzer

Detailed procedure with screenshots

Purpose

Use this guide to start the Contract Analyzer locally, upload a contract, wait for analysis, review the generated dashboard, and download the output.

Prerequisites

- Node.js and npm are installed and available in PowerShell.
- The Contract Analyzer project folder is available on your computer.
- A supported contract file is ready: PDF, DOC, or DOCX, maximum 25 MB.
- Use one contract per analysis and keep the terminal window open while working.

Important

The dashboard is AI-generated. Validate material findings, external references, legal conclusions, and business decisions through human review.

Step 1 | Start the application

Objective

Install the project dependencies and launch the local web server.

1. Open Windows PowerShell or Terminal.
2. Change to the Contract Analyzer project directory. You can also open the project folder in File Explorer, click the address bar, type PowerShell, and press Enter.
3. Run `npm install`. Wait until dependency installation finishes. Review the terminal for errors. Funding notices are informational; vulnerability messages should be assessed according to your project security process.
4. Run `npm start`. Do not close this terminal while using the application.
5. Confirm the terminal displays Contract Analyzer running at `http://localhost:3000` and shows the output folder path.

Expected result

The Node.js server remains running and the application is available at `http://localhost:3000`.

```
PS C:\Users\PrathmeshM2\Desktop\Contract Analyzer Dashboard - v08> npm install

21 packages are looking for funding
  run `npm fund` for details

found 0 vulnerabilities
PS C:\Users\PrathmeshM2\Desktop\Contract Analyzer Dashboard - v08> npm start

> contract-analyzer-app@1.0.0 start
> node server.js

Contract Analyzer running at http://localhost:3000
Output folder: C:\Users\PrathmeshM2\Desktop\Contract Analyzer Dashboard - v08\output
```

Figure 1. PowerShell showing dependency installation and the successful local server start.

Step 2 | Open the upload page

Objective

Access the locally running Contract Analyzer in a web browser.

6. Open Microsoft Edge, Google Chrome, or another supported browser.
7. Enter `http://localhost:3000` in the address bar and press Enter.
8. Confirm that the Upload Contract page appears.
9. Review the submission requirements before continuing: PDF, DOC, or DOCX; maximum size 25 MB; one document per upload.

Troubleshooting

If the page does not load, return to PowerShell and verify that npm start is still running and that no startup error is displayed.

Figure 2. Upload Contract page displayed at localhost:3000.

Step 3 | Choose the contract file

Objective

Browse to the source contract and select exactly one supported file.

10. Select Contract File.
11. In the Open dialog, navigate to the folder containing the contract.
12. Select the required PDF, DOC, or DOCX file.
13. Verify the filename carefully to avoid analyzing the wrong contract.
14. Select Open to attach the file.

File check

The example selects CTIND_ClientDBA Physician Diagnostic AI Rules Engine.pdf. Your filename will be different.

Figure 3. Windows file picker used to select the contract.

Step 4 | Verify the selected file

Objective

Confirm that the intended document is attached before analysis begins.

15. Check the filename displayed next to the file-selection control.
16. Check the Selected line beneath the control and confirm it matches the intended contract.
17. If the wrong document is shown, select the file control again and choose the correct file.
18. Leave the browser tab open. The application proceeds with the selected file and records completed analyses in history.

Upload Contract

Kindly upload contract to be analyzed using AI.

Submission Requirements:

- Accepted formats: PDF, DOC, DOCX
- Maximum file size: 25 MB
- Only one document may be uploaded

Select Contract File

Choose File CTIND_Clie..._Engine.pdf

Selected: CTIND_ClientDBA_Physician_Diagnostic_AI_Rules_Engine.pdf

View Analysis History

Clear

Analyze Contract

Disclaimer: This is an AI generated analysis, final decision require human judgement.

Figure 4. Selected contract filename displayed on the upload page.

Step 5 | Wait for extraction and analysis

Objective

Allow the application to extract contract text and generate the analysis.

19. After file selection, wait while the progress message is displayed.
20. Do not refresh the page, close the browser tab, stop the terminal, or select another file during processing.
21. Processing may take several minutes depending on the document size and complexity.
22. If processing remains stuck for an unusually long period, inspect the PowerShell terminal for errors before retrying. Avoid repeated submissions until the current run has finished or clearly failed.

In-progress indicator

The message “Extracting text and analyzing the contract... this can take few minutes.” confirms that processing is underway.

Figure 5. Contract extraction and analysis in progress.

Step 6 | Confirm successful generation

Objective

Verify that the dashboard has been generated and saved to analysis history.

23. Wait for the success message on the upload page.
24. Confirm that the message identifies the expected client or contract.
25. Note that the generated dashboard is automatically downloaded and saved to analysis history.
26. If no success message appears, review the terminal logs and retry only after resolving the reported issue.

Expected result

A message confirms that the dashboard was generated and can be reopened from View Analysis History.

Figure 6. Successful dashboard generation confirmation.

Step 7 | Open Analysis History

Objective

Locate the completed analysis and open or download the saved dashboard.

27. Select View Analysis History.
28. Confirm that the history page lists the completed record. Latest analysis will be 1st item in the table.
29. Verify the client name and source filename.
30. Select View to open the generated dashboard in the browser.
31. Select Download when you need a local copy of the generated dashboard. Use Clear only when you intentionally want to remove stored history.

Caution

Clearing history may remove access to saved records. Download any required outputs before using Clear.

Figure 7. Analysis History showing the completed contract record.

Step 8 | Review the generated dashboard

Objective

Evaluate each dashboard section and validate the AI-generated findings before making decisions.

32. Open the completed dashboard from Analysis History.
33. Use the left navigation to review all eight sections in sequence.
34. Compare extracted facts, dates, amounts, commitments, and clause references against the original contract.
35. Treat risk ratings, recommendations, benchmarks, and rewritten clauses as decision support, not final legal advice.
36. Record discrepancies and route material findings to the appropriate legal, commercial, security, or delivery reviewer.

Figure 8. Generated Contract Analyzer dashboard and section navigation.

Key SLA Commitments

Review measurable commitments such as completion dates, acceptance windows, defect-resolution targets, and payment terms. Confirm every target against the source clause.

localhost:3000/output/clientdba-ctind-clientdba-physician-diagnostic-ai-rules-engine-analysis-20260715-114843.html

compliance responsibility unclear.

Key SLA Commitments

✓ All 1 benchmarked SLA meet market standard

SLA / METRIC	TARGET	MEASUREMENT	REMEDY / PENALTY	VS STANDARD	RISK
Project completion date	31-Dec-2026	Completion by Agreed Completion Date or mutually agreed extended date	Not stated CTIND entitled to revise delivery schedule and charge additional fees through change management if delays attributable to ClientDBA	—	High
Milestone acceptance within 10 business days	10 business days	ClientDBA to complete UAT and provide written conformance/non-conformance within 10 business days; deemed accepted if no response	Not stated Deemed acceptance if ClientDBA does not respond within 10 business days	—	Medium
Critical and high-severity defect resolution	Resolved or approved workaround before milestone acceptance	Mutually agreed blocking defects must be resolved or have approved workaround	Not stated Defects must be resolved or have approved workaround	No target stated	Medium
Payment terms	30 days	Undisputed invoices payable within 30 days from receipt if Agreement does not specify payment terms	Not stated	—	Low

Figure 9. Key SLA Commitments section of the generated dashboard.

Contract Overview

Validate parties, title, contract type, dates, commercial category, renewal terms, and other extracted metadata.

Figure 10. Contract Overview section of the generated dashboard.

Top Risks

Review each high-risk explanation, evidence excerpt, section, and page reference. Confirm that the quoted evidence supports the stated risk.

Figure 11. Top Risks section of the generated dashboard.

SLA Risk Assessment

Use filters and the extracted clause/risk ledger to inspect service-level or delivery obligations. Verify missing targets and ambiguous language manually.

Figure 12. SLA Risk Assessment section of the generated dashboard.

Commercial Impact

Validate contract value, pricing model, milestone amounts, acceptance conditions, and estimated value at risk. Recalculate important figures independently.

6. Recommendations & Rewrites
7. Legends & Assumptions
8. Benchmark vs Standard

Note: External references cited in the contract have not been validated and must be reviewed manually.

Commercial Impact

Financial interpretation followed by exposure model.

Financial interpretation

USD 275,000

- **Contract value:** USD 275,000 fixed price for 5-month AI diagnostic tool development engagement (01-Aug-2026 to 31-Dec-2026).
- **Pricing model:** Fixed price with milestone-based invoicing; five milestones ranging from USD 35,000 to USD 75,000 payable upon acceptance or deemed acceptance.
- **Value at risk:** Full USD 275,000 at risk due to schedule uncertainty, deemed acceptance, clinical validation exclusions, and open-ended delay fees.
- **Excluded costs:** Cloud infrastructure, AI platforms, medical knowledge bases, LLM/API subscriptions, security tools, lab interfaces, EHR integrations, and monitoring tools excluded; material unbudgeted costs likely.
- **Additional fees:** CTIND can charge additional fees for schedule revisions due to ClientDBA-caused delays; no cap or quantification stated; creates open-ended cost exposure.

Commercial baseline summary

COMMERCIAL FIELD	EXTRACTED / DERIVED VALUE	COMMERCIAL INTERPRETATION
Contract Value	USD 275,000	Fixed price for 5-month engagement; excludes infrastructure, third-party tools, taxes, and potential additional fees for ClientDBA-caused delays.
Payment Terms	Milestone-based invoicing; 30 days if MSA does not specify	Five milestone payments ranging from USD 35,000 to USD 75,000 upon acceptance or deemed acceptance; actual payment terms depend on unuploaded MSA.
Pricing Model	Fixed Price	Fixed-price engagement with committed deliverables and acceptance criteria; CTIND owns budget and can charge additional fees for ClientDBA-caused delays.
EM Level	EM4 – Fixed Price	Fixed-price model with milestone commitments, acceptance criteria, and CTIND ownership of delivery schedule revision rights and change-based fee adjustments.
Excluded Costs	Infrastructure, AI platforms, security tools, integrations, regulatory advisory, post-production support	Material costs excluded from USD 275,000; ClientDBA must budget separately for cloud, AI platforms, security tools, and ongoing support.
Additional Fee Exposure	Uncapped additional fees for ClientDBA-caused delays	CTIND can revise schedule and charge additional fees if ClientDBA causes delays; no cap, quantification, or delay definition stated; creates open-ended cost risk.

Revenue protection controls

- 1 **Milestone Acceptance Governance** ClientDBA Project Manager / Clinical Lead
Establish clear acceptance criteria, quality gates, and production-readiness sign-off for each milestone; prevent deemed acceptance without adequate validation; require critical defect resolution before final acceptance.

- 2 **Dependency Tracking and Escalation** ClientDBA Project Manager

Figure 13. Commercial Impact section of the generated dashboard.

Recommendations & Rewrites

Assess negotiation actions and proposed safer wording. Obtain legal and business-owner approval before using rewritten clauses.

7. Legends & Assumptions
8. Benchmark vs Standard

Note: External references cited in the contract have not been validated and must be reviewed manually.

Recommendations & Rewrites

Negotiation actions and safer clauses.

Actionable recommendations & improved clause rewrites

• **High** Section 2 - Term of the SOW / Section 4 - Delivery Milestones: Change project completion date from expected to committed; add service credits or liquidated damages if CTIND misses committed date without ClientDBA-caused delays.

Original wording or summarized risky wording

The project under this SOW is expected to be completed by 31-Dec-2026 or any other extended date as mutually agreed between the parties.

Improved negotiation wording

The project under this SOW shall be completed by 31-Dec-2026 (Committed Completion Date). If CTIND fails to complete the project by the Committed Completion Date due to causes not attributable to ClientDBA, CTIND shall pay ClientDBA liquidated damages of [X]% of total SOW Fees per week of delay, up to a maximum of [Y]% of total SOW Fees. Extensions to the Committed Completion Date require written agreement and documented ClientDBA-caused delay.

• **High** Section 7 - Acceptance Process: Replace deemed acceptance with explicit quality gates and production-readiness criteria; require critical defect resolution before final milestone acceptance.

Original wording or summarized risky wording

If ClientDBA fails to provide such conformance or non-conformance within the Acceptance Period, the milestone shall be deemed accepted by ClientDBA.

Improved negotiation wording

If ClientDBA fails to provide written conformance or non-conformance within the Acceptance Period, the milestone shall be deemed accepted by ClientDBA, provided that: (a) CTIND has delivered all milestone deliverables as specified in Annexure 1; (b) all critical and high-severity defects identified during testing have been resolved (not merely worked around); and (c) for the final milestone (M5), ClientDBA's clinical lead has provided written production-readiness sign-off confirming clinical validation and safety review are complete. Deemed acceptance shall not apply to the final milestone without explicit clinical sign-off.

• **High** Section 8 - Client Dependencies / Section 4 - Delivery Milestones: Define specific dependency SLAs, delay measurement criteria, and cap on additional fees for ClientDBA-caused delays.

Original wording or summarized risky wording

Delays in approvals, sample data, environments, licenses,

Improved negotiation wording

ClientDBA shall provide dependencies per the following

Figure 14. Recommendations & Rewrites section of the generated dashboard.

Legends & Assumptions

Read the rating legends, confidence definitions, clause classifications, and assumptions so that findings are interpreted consistently.

8. Benchmark vs Standard

Note: External references cited in the contract have not been validated and must be reviewed manually.

Legends & Assumptions

Management decision, risk, priority, clause type, confidence and assumptions.

Management Decision Legend

DECISION	MEANING	TYPICAL USE
Proceed	The contract can move forward as drafted because the remaining risks are low-impact, clearly controlled, and unlikely to materially change price, delivery, legal exposure, security obligations, or termination rights.	Use when risks are mostly Low and normal governance is sufficient.
Proceed with Conditions	The contract can move forward only if specific conditions are completed first, such as confirming missing documents, assigning owners, agreeing operating controls, documenting approvals, or accepting defined residual risks.	Use when the model is manageable but specific documents, owners, or controls must be confirmed first.
Renegotiate	The contract should not be accepted as-is because one or more terms could materially affect cost, revenue, service credits, legal remedies, security obligations, termination rights, step-in rights, payment recovery, or delivery feasibility.	Use when one or more material terms create unacceptable commercial, legal, or security exposure.
Do Not Proceed	The contract should not move forward because the risk is unacceptable, cannot be mitigated with reasonable wording or controls, lacks required authority, or creates exposure that leadership should not accept.	Use when required authority, governing agreement, or key protections cannot be confirmed.

How Management-ready Decision is derived

ASPECT	HOW IT IS DERIVED
What this is	A single management call on the contract: Proceed, Proceed with Conditions, Renegotiate, or Do Not Proceed.
How the call is made	The tool looks at every risk it found and weighs how many are High vs Medium vs Low and how serious they are. Lots of serious (High / P1) risks push the call toward "Renegotiate" or "Do Not Proceed"; mostly Low risks lean toward "Proceed".
The "Proceed if" list	Things you should confirm or fix BEFORE signing — e.g. obtain a referenced agreement that was not uploaded, or close a specific high risk.
The "Renegotiate now" list	The specific clauses worth pushing back on before signing — e.g. unfavourable payment, liability, security, termination or SLA terms.
Where it comes from	Only from clauses found in the uploaded contract. Nothing is assumed or invented, and the wording is not copied from any past contract.

How Concise Management Summary is generated

ASPECT	EXPLANATION
What this is	A short, plain-language recap (up to 5 points) of the contract's biggest risks and actions, written for busy decision-makers.
How it is built	The tool reads the risks and the key commercial, legal, SLA and termination terms it extracted, then writes the five most important takeaways as a bold header plus a one-line explanation.
What it usually covers	The main term to renegotiate, any referenced agreement that must be checked, SLA / service-credit evidence, commercial or termination exposure, and whether the contract is properly signed.

Figure 15. Legends & Assumptions section of the generated dashboard.

Benchmark vs Standard

Compare benchmarked SLAs with the internal playbook. Note which checks are automatically scored and which require human confirmation.

1. Executive Decision Brief
2. Contract Overview
3. Top Risks
4. SLA Risk Assessment
5. Commercial Impact
6. Recommendations & Rewrites
7. Legends & Assumptions
- 8. Benchmark vs Standard**

Note: External references cited in the contract have not been validated and must be reviewed manually.

Benchmark vs Standard

How each SLA scores against the standard playbook, plus the standards themselves.

How to use this page

Every service-level commitment we extract is scored **automatically, in code** — never by the AI — against a fixed benchmark playbook, so the verdict is deterministic and cannot be invented. Read it in three steps:

1. **Scorecard** — how many SLAs meet the standard, fall below it, or carry an uncapped penalty.
2. **This contract vs standard** — each SLA's extracted target beside the applicable standard and the verdict:
✓ Meets standard the stated target meets or beats the benchmark (**pass**). ⚠ Below standard the stated target is worse than the benchmark (**fail** — negotiate). ⚠ Uncapped penalty a credit/penalty exists with no cap (**fail** — negotiate). No target stated the SLA clause was found but no measurable value was given (**missing** — verify manually).
3. **Reference standards** — the full playbook the verdicts are based on.

What is and isn't auto-scored. Only **numeric threshold** checks get a pass/fail verdict above (a percentage or time the tool can read and compare). Everything else in the Reference Standards below — **Presence** ("is this protection in the contract at all?"), **Quality**, **Consistency**, **Risk-flag** and **Evidence** checks, including the Supplier and AI/Token safeguards and the ARR/funding items — is shown as the house standard **for human review and is NOT auto-graded**. A blank or absence there does not mean the contract complies; a reviewer must confirm it. Source: internal SLA / SOW / Project-Risk playbook (A–W).

BENCHMARKED SLAs

This contract vs standard

SLA / METRIC	EXTRACTED TARGET	APPLICABLE STANDARD	VERDICT
Critical and high-severity defect resolution	Resolved or approved workaround before milestone acceptance	≤ 8 h (P2)	No target stated

Reference standards (benchmark playbook)

The full house playbook the verdicts point to. Numeric items are auto-scored above; presence, quality, consistency and risk-flag items are for human review.

Search sections... (e.g. availability, security, ARR, tokens, defects)

Expand all

Collapse all

– Supplier Safeguards (funding-contingent contracts) (11)

CATEGORY	METRIC / CHECK	STANDARD
Supplier safeguard	Fallback payer if programme/AWS funding fails or is denied	Must exist (critical)
Supplier safeguard	Payment for accepted / in-flight / completed work regardless of milestone	Must be stated
Supplier safeguard	Relief when the customer misses ARR (outside supplier control)	Must exist
Supplier safeguard	No full-fee forfeiture for partial causation ("in whole or in part", sole/exclusive remedy)	Flag if present (critical)
Supplier safeguard	Notice and cure before withholding or forfeiture	Must exist
Supplier safeguard	Proportionate reduction — affected work only	Should apply only to affected deliverables

Figure 16. Benchmark vs Standard section of the generated dashboard.

Completion check

All eight sections have been reviewed, key findings are traceable to source clauses, and material conclusions have an assigned human reviewer.

Step 9 | Duplicate Analysis Detection

The application prevents duplicate analysis by checking the content of the uploaded contract, not only its filename.

Scenario 1: The same file is uploaded again

1. Upload the same contract file that was analyzed previously.

2. Start the analysis again.

3. The application detects that an output has already been generated for the same contract content.

4. A notification informs the user that the output is already available and displays the name under which it was generated. The application does not create another duplicate output.

Scenario 2: The filename is changed, but the file content remains the same

1. Rename the previously analyzed contract file without changing its contents.

2. Upload the renamed file and start the analysis.

3. The application compares the contract content and identifies it as a previously analyzed document even though the filename is different.

4. A notification informs the user that the output has already been generated and displays the existing output name. No new duplicate output is created.

Expected result: Duplicate detection is based on file content. Renaming an unchanged file does not trigger a new analysis or generate another output.

Figure 17. Browser message displayed during the output action.

Figure 18. Browser view after completing the output action.

Final result

The application is running, the contract has been analyzed, the dashboard has been reviewed, and a local copy has been verified.

Quick troubleshooting checklist

Issue	Recommended action
localhost:3000 does not open	Confirm npm start is running, inspect terminal errors, and verify the port is not blocked or already in use.
File cannot be selected	Confirm the extension is PDF, DOC, or DOCX and the file is no larger than 25 MB.
Analysis does not complete	Keep the browser and terminal open, review terminal logs, and retry only after the current run has stopped or failed.
Dashboard data looks incorrect	Compare with the source contract and escalate for human review. Do not rely on unverified AI output.

Download cannot be found

Check the browser Downloads list and the configured download folder, then repeat Download from Analysis History if required.
